

|     | Scientific Program of the 10th International Posture Symposium - Poster presentations                                                                          |
|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     | Monday - September 21, 2026                                                                                                                                    |
|     | POSTERS 1 15:20 - 16:20                                                                                                                                        |
| P1  | Van Baelen E. (Belgium): Posture and gait outcomes following otolith-targeted vestibular implantation in adults with bilateral vestibulopathy                  |
| P2  | Arts R. (Belgium): Baseline patient-reported and demographic predictors of gait response after vestibular implantation in adults with bilateral vestibulopathy |
| P3  | Reynolds R. (UK): Age-related changes in head-to-foot proprioception do not influence vestibular-evoked balance response direction                             |
| P4  | Fujii M. (USA): The impact of mild hypoxia on postural control                                                                                                 |
| P5  | Huxley J. (UK): Gait and balance features in Parkinson's disease                                                                                               |
| P6  | Janovič Š. (Slovakia): Longitudinal change in antisaccade error rate is associated with TUG performance after STN-DBS in Parkinson's disease                   |
| P7  | Kitsikoudis P. (Greece): Muscle activation patterns underlying successful stopping of voluntary sway at different body lean positions                          |
|     | Tuesday - September 22, 2026                                                                                                                                   |
|     | POSTERS 2 10:10 - 11:00                                                                                                                                        |
| P8  | Ely M. (Czech Republic): Participants' perspectives on the EnviroFit60+ physical activity and environmental health program for older adults                    |
| P9  | Jasenská M. (Czech Republic): Monitoring gait motor imagery across experimental conditions before and during fmri                                              |
| P10 | Gábor M. (Slovakia): Autoreflex prenatal and postnatal positions: a clinical concept for postural control rehabilitation                                       |
| P11 | Kimijanová J. (Slovakia): Alterations of anterior limit of stability in pregnancy and postpartum under visual deprivation                                      |
| P12 | Hirjaková Z. (Slovakia): Trunk sway jerkiness: a sensitive indicator of fear-related postural stiffening during virtual height exposure                        |
| P13 | Musialová L. (Czech Republic): Lower-limb dynamic stability profile and its association with functional hop performance in female football players             |
